

A quick guide for parents and carers on how to implement Math-Whizz in your home

Your virtual tutor

Math-Whizz behaves very much like a human tutor. Once you sign up, the Tutor begins by diagnosing your child's knowledge gaps across several topics with an in-depth assessment. The Tutor then automatically creates a learning plan tailored to your child's specific needs based on their 'Math Age'. With an hour a week, your child can expect to increase their Math Age by 18 months in the first year!

30-90 minutes per week.
Broken into smaller sessions of 20 minutes.

Find a work space with no distractions.

Constantly aim for at least 3 Progressions a week.

Motivate your child with rewards like the PlayZone.

Getting the most out of Math-Whizz

- The initial assessment takes around 45 minutes to complete, which your child can complete in multiple sittings. The purpose of the assessment is to give the Tutor an accurate understanding of your child's needs. It is fine to help your child read instructions and navigate between screens but do not answer questions for them - the Tutor needs to work out the child's Math Age, not yours!
- Your child will love Math-Whizz for the first 3-6 weeks. You might then notice that their initial enthusiasm wears off a little; a weekly schedule will help turn learning into a habit (use our weekly planner to set your schedule). If they stick with it, their confidence will grow and you will see amazing improvements within a few months.
- You can sit with your child or leave them to it - the Tutor automatically adapts to their needs.
- Aim for at least 3 Progressions a week and use Topic Challenge for extra practice and consolidation. Earn 'Superstar' status on Math-Whizz by meeting your targets every week and use the PlayZone as a reward.
- Encourage your child to answer every question. If they get stuck, do not give the answer - instead, look at the question together
- Login to Parent Dashboard to see your child's progress. To set up your account, just log into your child's account at whizz.com/en-us/login, select 'Parents' from the menu and create your username and password.

Finally

If you need any help or have any questions, please contact our support team who will be happy to help.

You can do this by contacting support@whizz.com or visiting our [parents FAQ pages](#).
